PROFESSIONAL SUMMARY

Computer Science and Engineering undergraduate focused on backend and full-stack development with practical experience building REST APIs, authentication flows, and database-driven applications.

EDUCATION

Bangladesh University of Business and Technology (BUBT) <i>B.Sc. in Computer Science and Engineering</i>	Dhaka, Bangladesh 2023 – 2027
Doweed Public School and College <i>Higher Secondary Certificate (HSC)</i>	Jessore, Bangladesh 2022
Jessore Shikkha Bord Gov. Model School and College <i>Secondary School Certificate (SSC)</i>	Jessore, Bangladesh 2020

SKILLS

Programming Languages: C, C++, Python, Java, JavaScript, SQL, HTML/CSS, LaTeX

Frameworks & Platforms: Node.js, Express.js, Spring Boot, React.js, Tailwind CSS, CustomTkinter

Databases & Tools: MySQL, MongoDB, Git, GitHub, Postman, Figma

Core Strengths: REST API Design, Authentication & Authorization, Backend Architecture, Problem Solving

PROJECTS

Frontend Smart Bachelor Life — GitHub

- Developed responsive frontend interfaces for bachelor/flat management workflows including meal tracking, expenses, and group operations
- Integrated UI with backend APIs and structured reusable components to improve maintainability and user experience

Backend Smart Bachelor Life — GitHub

- Built a production-style REST API for shared bachelor/flat management covering authentication, group roles, meal tracking, bazar, expenses, chat, and payment workflows
- Implemented middleware-based request handling and structured route/controller organization to improve maintainability and feature scalability

Bank App Backend — GitHub

- Built a Node.js and Express backend for banking-style workflows with modular routes, middleware, and structured API handling
- Implemented core service endpoints and request validation patterns to support secure and maintainable backend development

ExchangeXP (Spring Boot Backend) — GitHub

- Contributed to backend development for a team skill-trading platform using Java and Spring Boot
- Developed modular API components for user and platform workflows, improving code organization for collaborative development

School Management System — GitHub

- Developed a Python desktop application with CustomTkinter and MySQL for attendance, student records, and course management
- Designed SQL-backed data operations for core academic workflows with a focus on usability and data consistency

Competitive Programming Practice — GitHub

- Maintains C++ problem-solving repository focused on data structures, algorithms, and contest-style optimization
- Applies algorithmic thinking from competitive programming to improve implementation quality in application projects

EXPERIENCE

Maintained an active public engineering portfolio with **40 repositories** spanning backend systems, full-stack applications, and desktop software

Sustained high development consistency with **1,000+ GitHub contributions in the last year** across personal and collaborative repositories

Collaborated through pull-request workflows in team projects, contributing feature implementations and backend improvements

AWARDS & ACHIEVEMENTS

Intra-University Programming Contests: Participated in 3 programming contests organized within my university, showcasing strong problem-solving and algorithmic thinking

Intra-University Hackathon: Participated in a university-organized hackathon, collaborating with a team to design and build an innovative project under time constraints
